**POWERTRACK RELEASE 5 MOBILITY SOLUTION AUTOMATES FIELD REPORTING FOR CONSTRUCTION COMPANIES**

(GIG HARBOR, WA) – Compsee, a software developer and systems integrator of mobile data collection solutions, has announced the general availability of PowerTrack® Release 5. The new release builds on the success of the PowerTrack software series in automating field data collection for construction companies.

According to Billy Graham, president of Compsee, “PowerTrack Release 5 greatly expands the ability of construction companies to automate their payroll data collection process, in addition to the variety of other field reports such as equipment and material usage, job progress and work orders. The benefit is much faster data availability for decision making, a more organized and efficient data collection and review process, and bottom line savings for our customers.”

The new PowerTrack Release 5 features expanded data entry capability, GPS support, streamlined management of crew lists, and several administrative support enhancements. Since its introduction in 2003, PowerTrack has led the market for field data collection in the construction and shipbuilding industries, leveraging rugged mobile terminals and cellular data network growth to help companies automate their daily reporting requirements.

Compsee is a division of Control Solutions, Inc. Founded in 1984, Compsee is a leader in the application of automated data collection technologies and mobility solutions. Compsee offers a comprehensive range of planning and integration services, including wireless network design and consulting services. With corporate offices in Gig Harbor, Washington, Compsee has its sales headquarters in Melbourne, Florida, and sales offices throughout the United States.
