

Leading pickup and delivery organizations know they must optimize their delivery schedules and automate the paper processes in the field. The goRoam.Delivery solution provides an easy to install, easy to operate answer to these needs. Through optimization of pickup and delivery with best in class optimization and scheduling to automated mobile dispatch and electronic proof of delivery, goRoam provides a complete delivery solution.

The components of the delivery solution are modular. goRoam easily interfaces with existing order management systems to optimize delivery schedules based on driver or vehicle constraints. Orders are pushed to drivers wirelessly where they can view their route stops, complete the stop, record products/services delivered, and get an electronic signature for Proof of Delivery (POD). A customer copy can be printed on-site and an electronic copy sent to customer service. The net result is a significantly streamlined Order to Cash (OTC) cycle.

goRoam.Delivery features:

- ✓ Pre-trip checklist
- ✓ Vehicle inspection
- ✓ View route stops with Estimated Time of Arrival (ETA) and estimated duration
- ✓ Barcode scan or enter items delivered
- ✓ For bulk deliveries - force recording of bulk tank readings
- ✓ Electronic signature capture
- ✓ Take payments
- ✓ Print a fully customizable delivery ticket
- ✓ Automatically email customer service delivery exceptions
- ✓ Log events such as flat tire, waiting on dock, accident, etc. with rollup analysis
- ✓ Post-trip checklist and completion
- ✓ Central dispatch board to view status

goRoam a line of mobile products designed to automate key field operations. goRoam includes mobile modules and a web-based suite of server modules, each of which can be configured to meet specific business process requirements. goRoam is comprised of:

- **goRoam mobile client** - a suite of modules for automating key field activities such as sales, service, delivery, asset tracking and inspections.
- **MobileHub server** - a web application server that centralizes business rules, provides wireless synchronization with mobile clients, integration with legacy systems, and services business objects for the SmartClient application.
- **SmartClient web app** - a .NET SmartClient business application for web users to administer and manage the goRoam server and business functions.
- **Integration Services** - a job scheduler and suite of tools to integrate with legacy applications. Integration capabilities include import/export via file transfer, web services, database access, message queues, Excel and email.
- **Reporting Services** - a suite of 90+ reports objects that can be accessed online or scheduled for delivery
- **External Adapters** - pre-built components that enable plug-in integration with key partner systems such as ERP order entry, accounts receivable, route optimization, fuel and tax calculations, and more. Partner adapters include Red Prairie, SAP, Solomon, MAS, and QuickBooks.
