

CTGTALK MultiModal Voice Technology on Your Terms

Seamless integration and rapid implementation for optimal enterprise-wide management of inventory, resources, and facilities

Eyes on Task, Hands-free Operation

'Safety-First' voice prompting allows operators to focus eyes and hands on tasks — greatly enhancing productivity

High-Quality Audio Output

Both male or female voices are available, in numerous languages — easily adaptable to any work environment

Ambient Noise Immunity

Microphone dynamically adjusts for background and impulse noise, eliminating the need for manual noise sampling

Accurate Voice Recognition

Delivers 99%+ accuracy, even in extreme high-decibel challenges such as industrial warehouses and manufacturing environments

Conversational Filtering

Recognizes the difference between user commands and conversation with unsurpassed accuracy

Open Architecture/ Seamless Integration

Designed to leverage and enhance current business logic processes and infrastructure — to quickly facilitate process improvements

Database and Device Independence

Integrates with existing database technology, and operates on virtually all speech-enabled mobile and stationary computers

Speaker Independence

No voice 'training' needed — system operates regardless of accent and language, eliminating learning curves associated with other voice technologies

Real-time Reporting

Real-time updating and 'store-and-forward' functionality ensures that data is always current on all systems

At-a-glance Monitoring

Unique interface ensures immediate enterprise-wide status — required to spot issues on warehouse floor as they occur

MultiModal Technology

CTGTALK™ MultiModal allows users of any integrated peripheral to switch from voice instruction/speech recognition to barcode scanning, keyboard/screen interaction, RFID, or Bluetooth, freely and seamlessly within a single user interface
